

Production-ready features

Homework

Recap

1. DevTools
2. Auditing
3. RestClient
4. Logging
5. Actuator
6. OpenAPI and Swagger

Homework

1. Use the currency API to build your own API that converts one currency to another.

Use this API: <https://app.freecurrencyapi.com/request-playground> and build this API:

<http://localhost:8080/convertCurrency?fromCurrency=INR&toCurrency=USD&units=500>

This will convert INR 500 TO USD

2. Add logs in all the services for code you have created so far.
3. Create auditing in all the entities you have encountered so far.
4. Add OpenAPI and Swagger UI in your project
